

The Marnella Homes Difference

All new homes become existing homes once moved into, just like a new car becomes used once it is driven off the car lot. What features in your next new home will provide lasting value when it is resold as an existing home? We have created a guide that lists some of the features that we believe will provide lasting value and reward our homeowners year over year. Use this guide to assist in your home search to help fairly compare the new homes you are viewing. Take notes, ask questions and then you can make a truly educated purchasing decision. Remember, all new homes are not created equal. What is behind the sheet rock can be just as important as what is in front of it.
